DAY BY DAY

Every meal, with full macros

Open a day to see the foods, portions by calories, and the exercise that completes it.

Monday

A familiar, fiber-rich start to the week that fuels school focus and playground energy.

1,544 kcal

MEAL	FOODS	KCAL	PROTEIN G	CARBS G	FAT G
Breakfast >	Oatmeal with banana slices, cinnamon, and a drizzle of honey; low-fat milk	367	13	66	8
Lunch >	Peanut butter and strawberry jam sandwich on whole wheat; carrot sticks; a clementine	399	15	57	14
Snack >	Low-fat vanilla yogurt with blueberries and a granola sprinkle	219	10	32	6
Dinner >	Homemade baked chicken tenders, roasted sweet potato wedges, steamed broccoli, small dinner roll; glass of low-fat milk	559	31	69	19
Total	Fiber 26 g	1,544	69	224	47

Exercise: Playground games: tag, climbing, and monkey bars **60 min** · Moderate
≈140 kcal burned Whole-body play + bone-loading fun

Tuesday

A taco-morning treat and a bean-and-cheese dinner show how plant protein can anchor a meal.

1,603 kcal

Wednesday

An Italian-themed day where pasta is balanced with vegetables and kid-sized portions.

1,532 kcal

Thursday

A playful bento makes trying new foods fun, and salmon brings omega-3s for a growing brain.

1,541 kcal

Friday

A comfort-food lunch balanced by a gently spiced curry that stretches her flavor range.

1,583 kcal

Saturday

Pancakes and pizza night keep weekend food fun while portions stay right-sized.

1,545 kcal

Sunday

A lighter recovery day: gentle movement and a simple family dinner set up the week ahead.

1,626 kcal

These sample weeks assume a typical mixed diet. Eat vegetarian, vegan, halal, or around allergies? The app generates this same week for your diet and cuisine, from 4,995 foods, sized to your own profile. [Get the app →](#)

PHYSIOLOGICAL PARAMETERS

What this plan moves, and why

Typical healthy values for this group, and the direction consistent nutrition + exercise nudges them. The app tracks 201 parameters like these across 16 body systems — see which to check daily, monthly, and yearly.

PARAMETER	TYPICAL HEALTHY RANGE	EXPECTED CHANGE	WHY
Growth & bone development	Steady height gain of about 5–6 cm per year	Stronger bone-mineral gains over the coming months	Daily calcium and vitamin D plus weight-bearing play
Motor skills & coordination	Improving balance, ball skills, and body control	Noticeably smoother coordination in 6–8 weeks	Varied play: climbing, skipping, swimming, and biking

PARAMETER	TYPICAL HEALTHY RANGE	EXPECTED CHANGE	WHY
Aerobic fitness	Can play actively for 60+ minutes a day	Runs and plays longer before tiring within 4–8 weeks	Daily active play builds heart and lung capacity
Healthy weight trajectory	BMI-for-age tracking near the middle percentiles	Stays smoothly on her own growth curve	Balanced meals and snacks matched to daily activity
Muscle & posture strength	Age-typical core, leg, and grip strength	Better posture and playground strength in 8–12 weeks	Climbing, swimming, and carrying games load muscles safely
Sleep quality	9–12 hours per night recommended at this age	Falls asleep faster and wakes more refreshed	Daytime outdoor activity plus a consistent bedtime
Focus & mood	Alert and even-tempered through the school day	Steadier attention and mood within a few weeks	Regular meals, fiber-rich carbs, and daily play breaks
Iron status & energy	Age-appropriate energy for school and sport	Consistent, steady energy across the day	Iron-rich foods paired with vitamin C for absorption

PHYSIOLOGICAL CHANGES

What a consistent week does for the body

From the nutrition plan

- ✓ Daily dairy delivers the calcium and vitamin D that peak bone-building years depend on.
- ✓ Fiber from whole grains, fruit, and vegetables keeps digestion regular and fullness steady between meals.
- ✓ Pairing iron-rich foods with vitamin C fruits supports healthy red blood cells and school-day energy.
- ✓ A predictable rhythm of three meals plus one snack keeps blood sugar and mood even.
- ✓ Keeping added sugar modest leaves room for the nutrient-dense foods a growing body actually needs.

From the exercise plan

- ✓ Weight-bearing play like running, skipping, and climbing stimulates bone density during this key growth window.
- ✓ Rotating through swimming, biking, soccer, and dance builds broad coordination and confidence in new sports.
- ✓ Hitting about 60 minutes of movement most days strengthens the heart and lungs and cements a lifelong habit.
- ✓ Active outdoor time earlier in the day helps her fall asleep faster and sleep more deeply.
- ✓ A gentle Sunday of stretching and walking teaches that rest is part of being active, not a break from it.

This is a sample week for a typical, healthy 9-year-old girl — real needs shift with growth spurts and activity, so let her appetite guide exact portions. Keep mealtimes relaxed, screen-free, and pressure-free.
