WEEK AT A GLANCE

Seven days, planned end to end

Calories per meal, daily totals, and the movement that pairs with them.

DAY	BREAKFAST	LUNCH	SNACK	DINNER	INTAKE	EXERCISE
Monday	539	487	292	680	1,998 kcal	Soccer practice with school team (drills + scrimmage) · 60 min
Tuesday	405	499	352	664	1,920 kcal	Basketball with friends at the park · 50 min
Wednesday	508	490	234	753	1,985 kcal	Swim session (laps + technique drills) · 45 min
Thursday	448	524	255	711	1,938 kcal	Hip-hop dance class · 60 min

DAY	BREAKFAST	LUNCH	SNACK	DINNER	INTAKE	EXERCISE
Friday	467	550	266	746	2,029 kcal	Easy jog with the r club + 10 minutes c stretching · 40 min
Saturday	476	507	249	782	2,014 kcal	Family bike ride on greenway · 60 min
Sunday	465	540	309	629	1,943 kcal	Gentle yoga at hon relaxed neighborh walk · 40 min

The exercise column shows one sensible week for this profile. The app plans movement around *you* — 5,404 exercises matched to your equipment, fitness level, and schedule, re-balanced as you log workouts. [Get the app →](#)

DAY BY DAY

Every meal, with full macros

Open a day to see the foods, portions by calories, and the exercise that completes it.

Monday		A colorful sheet-pan dinner refuels muscles after a hard soccer practice.				1,998 kcal
MEAL	FOODS	KCAL	PROTEIN G	CARBS G	FAT G	
Breakfast >	Overnight oats with sliced banana, peanut butter and chia; small glass of orange juice	539	16	81	19	
Lunch >	Tuna salad sandwich on whole-grain bread with lettuce; apple; baby carrots	487	32	58	15	
Snack >	Greek yogurt parfait with granola and mixed berries	292	19	40	7	
Dinner >	Sheet-pan honey-lime chicken with roasted sweet potatoes and broccoli; whole-grain roll	680	40	78	24	
Total	Fiber 39 g	1,998	107	257	65	
Exercise: Soccer practice with the school team (drills + scrimmage) 60 min · Vigorous ≈ 360 kcal burned Aerobic fitness + agility						
Tuesday		Mediterranean flavors pack in olive oil, fish and plenty of vegetables.				1,920 kcal
Wednesday		A plant-forward pad thai shows protein doesn't always have to come from meat.				1,985 kcal
Thursday		Iron-rich beef and beans help meet the higher iron needs of teen girls.				1,938 kcal
Friday		Indian-style dishes deliver fiber-rich legumes alongside whole grains.				2,029 kcal

Saturday

Homemade pizza night keeps food fun while the veggies keep it balanced.

2,014 kcal

Sunday

A lighter recovery day pairs easy movement with a colorful Middle Eastern spread.

1,943 kcal

These sample weeks assume a typical mixed diet. Eat vegetarian, vegan, halal, or around allergies? The app generates this same week for your diet and cuisine, from 4,995 foods, sized to your own profile. [Get the app →](#)

PHYSIOLOGICAL PARAMETERS

What this plan moves, and why

Typical healthy values for this group, and the direction consistent nutrition + exercise nudges them. The app tracks 201 parameters like these across 16 body systems — see which to check daily, monthly, and yearly.

PARAMETER	TYPICAL HEALTHY RANGE	EXPECTED CHANGE	WHY
Bone mineral density	Peak bone-building years — up to ~40% of adult bone mass forms in adolescence	Steady density gains over months	Calcium and vitamin D intake plus weight-bearing sports
Height growth velocity	Tracking along her growth curve after the early-teen spurt	Continues on-curve, no dips	Energy intake matched to growth and daily activity
Aerobic fitness (estimated VO2max)	38–44 mL/kg/min	Up 5–10% over 8–12 weeks	Soccer, swimming, dance and cycling most days

PARAMETER	TYPICAL HEALTHY RANGE	EXPECTED CHANGE	WHY
Muscular strength & coordination	Improving steadily through puberty	More reps and longer play without fatigue in 6–8 weeks	Varied sport practice plus protein spread across meals
Healthy weight trajectory (BMI-for-age)	Near the 50th percentile for age	Tracks smoothly along the growth curve — no restrictive dieting	Regular balanced meals sized to activity
Energy & iron status	Teen girls need more iron (about 15 mg/day)	Steady energy in class and sport	Iron-rich beans, beef, turkey and fortified grains paired with vitamin C fruit
Sleep duration & quality	8–10 hours recommended for teens	Easier sleep onset and a more consistent schedule	Daytime activity and regular meal timing
Focus & mood	Stable energy across the school day	Fewer mid-afternoon slumps within 2–4 weeks	Breakfast every day and steady carbs plus protein at lunch

PHYSIOLOGICAL CHANGES

What a consistent week does for the body

From the nutrition plan

- ✓ Calcium- and vitamin D-rich dairy at most meals supports the roughly 40% of adult bone mass built during the teen years.
- ✓ Roughly 90–110 g of protein a day, spread across four meals, fuels growth spurts and

muscle repair after sport.

- ✓ Iron from beef, beans and fortified grains — paired with vitamin C fruits — helps offset the higher iron needs of teen girls.
- ✓ Over 30 g of fiber daily from oats, whole grains, fruit and legumes keeps digestion comfortable and fullness steady.
- ✓ Eating breakfast and regular meals keeps blood sugar even, supporting concentration through the school day.

From the exercise plan

- ✓ Weight-bearing sports like soccer, basketball and dance stimulate bone density during these peak building years.
- ✓ Five to six varied active days steadily build aerobic fitness — VO2max typically rises 5–10% within 8–12 weeks.
- ✓ Mixing team sports, swimming, dance and cycling develops coordination, agility and confidence.
- ✓ One light recovery day of yoga and easy walking builds the habit of rest and lowers injury risk.
- ✓ Consistent daytime activity makes it easier to fall asleep — important when teens need 8–10 hours a night.

Teenage girls are in peak bone-building years, so calcium, vitamin D and iron matter most. This week matches food to growth and sport — it is about fueling well, never about restrictive dieting.
