DAY BY DAY

Every meal, with full macros

Open a day to see the foods, portions by calories, and the exercise that completes it.

Monday

Steady breakfast carbs and a familiar comfort-food lunch fuel an active school day capped by soccer.

1,745 kcal

MEAL	FOODS	KCAL	PROTEIN G	CARBS G	FAT G
Breakfast >	Oatmeal with banana slices and a spoonful of peanut butter; low-fat milk	461	18	66	16
Lunch >	Grilled cheese on whole wheat, tomato soup, apple slices	532	20	54	28
Snack >	Apple-cinnamon rice cakes with a thin spread of cream cheese	200	3	33	7
Dinner >	Baked chicken tenders, corn on the cob, roasted green beans, small dinner roll	552	30	67	21
Total	Fiber 27 g	1,745	71	220	72

Exercise: Soccer practice with friends **60 min** · Moderate to vigorous

≈200 kcal burned Aerobic fitness + coordination

Tuesday

Latin flavors make beans and avocado fun — an easy fiber win before an evening family bike ride.

1,786 kcal

Wednesday

An Asian-inspired day where colorful stir-fried vegetables ride along with a kid favorite, teriyaki salmon.

1,732 kcal

Thursday

Mediterranean staples — yogurt, hummus, olive oil — keep energy smooth through an afternoon swim lesson.

1,789 kcal

Friday

Pizza night done at home — same fun, more vegetables — lands on the week's lighter recovery day.

1,727 kcal

Saturday

A South Asian day — dal and roti deliver a hearty fiber boost to fuel the longest play session.

1,793 kcal

Sunday

A slower family day with a warming stew and easy outdoor play before the school week starts again.

1,775 kcal

These sample weeks assume a typical mixed diet. Eat vegetarian, vegan, halal, or around allergies? The app generates this same week for your diet and cuisine, from 4,995 foods, sized to your own profile. [Get the app →](#)

PHYSIOLOGICAL PARAMETERS

What this plan moves, and why

Typical healthy values for this group, and the direction consistent nutrition + exercise nudges them. The app tracks 201 parameters like these across 16 body systems — see which to check daily, monthly, and yearly.

PARAMETER	TYPICAL HEALTHY RANGE	EXPECTED CHANGE	WHY
Growth & bone development	Steady height gain of about 5–6 cm per year at this age	On-track growth with strong bone mineralization	Adequate calcium, vitamin D, and protein plus running and jumping play
Motor skills & coordination	Refining balance, throwing, catching, and climbing skills	Noticeably smoother, more confident movement over 8–12 weeks	Varied play — ball sports, swimming, playground climbing
Aerobic fitness	Can sustain 20–30 minutes of continuous active play	Longer play stamina and quicker recovery between games	45–75 minutes of moderate-to-vigorous play most days

PARAMETER	TYPICAL HEALTHY RANGE	EXPECTED CHANGE	WHY
Healthy weight trajectory (BMI-for-age)	BMI around 16.4 sits mid-range on the healthy percentile band	Continues growing along the same healthy percentile curve	Energy intake matched to growth and daily activity – no dieting
Muscular strength & posture	Bodyweight play builds age-appropriate strength	Better climbing, jumping, and sitting posture in 6–10 weeks	Monkey bars, swimming, and ball games load muscles naturally
Sleep duration & quality	9–12 hours per night recommended for ages 6–12	Faster sleep onset and fewer night wakings	Daytime outdoor activity and a consistent meal rhythm
Focus & mood	Attention dips when meals are skipped or sugary	Steadier attention and mood through the school day	Regular meals combining protein, fiber, and slow carbohydrates
Digestive regularity	Comfortable, regular digestion	More regular with less constipation within 1–2 weeks	18–29 g of daily fiber plus water and active play

PHYSIOLOGICAL CHANGES

What a consistent week does for the body

From the nutrition plan

- ✓ Balanced calories support steady growth along the same healthy percentile curve — fuel matched to play, never dieting.
- ✓ About 1300 mg of daily calcium plus vitamin D from milk, yogurt, and salmon builds bone

density during prime growth years.

- ✓ Regular meals combining protein, fiber, and slow carbs steady blood sugar, which shows up as better classroom focus and mood.
- ✓ 18–29 g of daily fiber from fruit, beans, and whole grains keeps digestion comfortable and regular.
- ✓ Keeping added sugar under 45 g a day protects developing teeth and trains taste preferences toward real food.

From the exercise plan

- ✓ At least 60 minutes of daily play strengthens the heart and steadily lengthens play stamina.
- ✓ Jumping, climbing, and running load growing bones exactly when they respond best, building lifelong bone strength.
- ✓ Varied movement — swimming, ball sports, biking — develops balance, coordination, and throwing skills during the prime motor-learning window.
- ✓ Active days bring faster sleep onset and deeper sleep, the hours when growth hormone does its main work.
- ✓ Playing with family and friends builds the lasting habit that active time is fun, not a chore.

For children 6–11 the goal is growth, not weight control: offer regular balanced meals, let appetite guide portion size, and aim for at least 60 minutes of fun, active play every day. Milk with meals and water in between covers hydration and bone-building calcium.
